GitHub — LinkedIn — LeetCode

Education

Jaypee University of Engineering and Technology, Guna

Aug 2023 – May 2027

Bachelor of Technology (B.Tech), Computer Science Engineering

Class X: 89%

Class XII: 76%

Technical Skills

Languages: C++, C, JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, React Router, Responsive Web Design

Backend: Node.js, Express.js, REST APIs, Socket.io

Database: MongoDB

Authentication & Security: JWT, Bcrypt

Cloud & APIs: Cloudinary API, WhatsApp Deep Link Integration

Tools: Git, GitHub, Postman, VS Code

Core CS: Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks

Projects

DineSync – QR Powered Restaurant Management System

MERN Stack — Socket.io

- Developed a full-stack restaurant management platform supporting Owner, Manager, Chef and Waiter dashboards using JWT-based role authentication and authorization.
- Engineered a real-time Kitchen Display System (KDS) using Socket.io enabling instant order synchronization, priority-based tracking and visual progress monitoring.
- Built a QR-powered contactless ordering workflow allowing customers to browse digital menus, place orders and maintain persistent carts.
- Implemented automated billing supporting UPI, cash and card payments, bill splitting, discount management and WhatsApp receipt delivery.
- Designed analytics dashboards displaying Total Revenue, Active Orders, Table Occupancy and Pending Kitchen Orders in real time.

OmniRoute – Multi-Vendor Retail SaaS Platform

MERN Stack — Cloudinary

- Built secure Customer and Admin dashboards using JWT authentication and bcrypt password hashing with role-based access control.
- Developed inventory management modules featuring complete CRUD functionality, product categorization and Cloudinary image storage integration.
- Designed a responsive storefront with instant search, filtering, persistent cart functionality and live order tracking.
- Engineered checkout workflows storing transactional data in MongoDB and automating vendor invoice generation through WhatsApp integration.
- Created business intelligence dashboards displaying Total Earnings, Order Volume and Top-Selling Products for operational insights.

Achievements

- Solved 150+ Data Structures and Algorithms problems on LeetCode covering Arrays, Strings, Linked Lists, Trees, BSTs, Graphs and Dynamic Programming.
- Strong understanding of algorithm design, recursion, searching, sorting and time-space complexity analysis.
- Built multiple production-scale MERN applications implementing authentication, cloud storage, real-time communication and analytics systems.
- Consistently practice coding interview problems and competitive programming to strengthen software engineering fundamentals.

Relevant Coursework

Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), Database Management Systems (DBMS), Operating Systems (OS), Computer Networks (CN), Software Engineering.
